gm.us1.gigya-api.com
platform.gigya.com
socialize.us1.gigya-api.com
ds.us1.gigya-api.com

Why

The certificates were changed since the previous ones were issued with Symantec PKI infrastructure which will not be trusted by Google Chrome browsers later on this year.

The new certificates were issued with a new PKI infrastructure which will continue to be trusted.

The Google Security Blog post detailing the issue can be found at <https://security.googleblog.com/2017/09/chromes-plan-to-distrust-symantec.html>.
