

# Accounts REST

Here's a partial list of what you can do with the Accounts API:

- Delete accounts
- Get detailed information on a single account
- Retrieve a list of the policies defined in a site
- Retrieve the schema of the Profile and Data objects
- Call one of Gigya's screen-sets
- Log users in to Gigya's userbase
- Set the policy for Gigya's Risk-Based Authentication (RBA)
- Search Gigya's Accounts userbase
- Update users' account info
- Authenticate users via their social network identities

↕ [Click for a full list of methods in Gigya Accounts REST API](#)

**Note:** If you plan on integrating Gigya's Accounts API, we highly recommend reading the [Registration-as-a-Service Guide](#). [Registration-as-a-Service \(RaaS\)](#) is a premium platform that requires separate activation. If **RaaS** is not part of your site package, please contact Gigya by filling in a [support form](#) through the Console. You can access the support page by clicking **Support** on the upper menu after logging into the Gigya Console.
