

Server Side SDKs

The SDKs listed below, not part of our core offering, provide access to the Gigya Service for various popular development environments. The SDKs constitute a wrap around Gigya's [REST API](#), making it simple to integrate Gigya's service in server side applications. The common integration use-case combines using a Server Side SDK for server side API method calls, with using the [Web SDK](#) for integrating Plugins and client site API method calls. Please refer to [Integration Overview](#) to receive the entire picture of Gigya service integration. If none of Gigya's official server-side SDKs match your environment, it may still be possible to integrate with Gigya's API. Please contact your Implementation Consultant if you don't see your environment listed. You can also make direct use of the [Gigya REST API](#).
