

WeChat

The license could not be verified: License Certificate has expired!

This page is a step-by-step guide for the process of opening and setting up an external application in WeChat as part of the [Gigya Setup](#) process. Please note that in order to use WeChat, you **must first** configure application settings for the WeChat social network in the Gigya console. WeChat cannot operate in demo mode.

Note: If your site is defined under one of Gigya's non-US data centers, replace domain references to "*socialize.gigya.com*" (or "*socialize.us1.gigya.com*") with **`https://socialize.<data_center>/`**

Where `<Data_Center>` is:

- `us1.gigya.com` - For the US data center.
- `eu1.gigya.com` - For the European data center.
- `au1.gigya.com` - For the Australian data center.
- `ru1.gigya.com` - For the Russian data center.
- `cn1.gigya-api.cn` - For the Chinese data center.

If you are not sure of your site's data center, see [Finding Your Data Center](#).

Domain references are defined in Gigya's [dashboard](#), externally in social network app definition pages, and when using Gigya's SDKs to set the domain (in particular the `APIDomain` field in class `GSRequest`).

When using any 3rd Party Apps with Gigya, it is important to ensure that you **Enable retrieving user contacts** from the [Permissions](#) page of the [Console](#) prior to making your app live. This enables the user's contacts retrieval from providers that don't consider this an elevated permission.

The screenshot shows the Gigya console interface. The top navigation bar includes 'Settings', 'Plugins', 'Reports', 'Customer Insights', and 'Identity Access'. The left sidebar shows 'Site Settings' expanded with options for 'Site Settings', 'Providers Configurations', 'Permissions', and 'Restrictions'. The main content area is titled 'Permissions' and has a sub-section 'General Permissions'. Two checkboxes are visible: 'Enable retrieving user contacts' (checked) and 'Enable mobile or desktop client applications API access' (checked). The 'Enable retrieving user contacts' checkbox is highlighted with a red box. Below it, the text reads: 'Enable the site to retrieve the user contacts list from supported providers.'

Phase 1: Opening an Application in WeChat

1. Go to the WeChat developers' page at <https://open.weixin.qq.com/>, click the Login link and enter your email and password to log into the site (if you have not signed up for the site yet, you will have to sign up first).

2. In the Applications page, click on the button to create a new app.

3. In the first step of the app creation process, enter your app's name and description and upload two icons for the app (28x28 pixels and 108x108 pixels in PNG format, up to 300 KB in file size). Then click the green "Next" button.

提交成功

网站应用名称 App Name	GigyaTest	请注意，名称将在微信登录等操作时被用户看到，且审核通过后不允许修改。需在2到40个字符之间。
英文名称 (选填) App Name in English (optional)	GigyaTest	显示在英文版微信中的名称
网站应用简介 App Description	App description.	最多80字
英文简介 (选填) App Description in English (optional)	App description.	最多80字
网站应用图片 App Icon (Small)	<p style="font-size: small;">请上传网站应用水印图片 28*28像素，仅支持PNG格式，大小不超过300KB。</p> <div style="border: 1px solid #ccc; display: inline-block; padding: 2px 5px;">选择文件</div>	<p style="font-size: small;">参考示例</p> 
网站应用图片 App Icon (Large)	<p style="font-size: small;">请上传网站应用高清图 108*108像素，仅支持PNG格式，大小不超过300KB。</p> <div style="border: 1px solid #ccc; display: inline-block; padding: 2px 5px;">选择文件</div>	<p style="font-size: small;">参考示例</p> 

下一步

4. In the second step of the app creation process:

- In the "Authorized Callback URL" box, enter your CNAME if you have one, or enter "**socialize.<Data_Center>**" ([how to determine your data center](#)).

Where <Data_Center> is:

- **us1.gigya.com** - For the US data center.
- **eul.gigya.com** - For the European data center.
- **au1.gigya.com** - For the Australian data center.
- **ru1.gigya.com** - For the Russian data center.
- **cn1.gigya-api.cn** - For the Chinese data center.

If you are not sure of your site's data center, see [Finding Your Data Center](#).

- In the Website URL box, enter your website URL.
- Click the link to download the WeChat registration form.

1 填写基本信息

2 填写网站信息

3 提交成功

授权回调域
Authorized Callback URL: socialize.gigya.com
请填写开发需要的合法域名, 用户使用微信帐号登录后, 只能回调至该域名下的页面

官网网址
Website URL: http://www.example.com
请填写网站的官网网址

Download registration form
网站信息登记表 请下载 [《微信开放平台网站信息登记表》](#)
扫描件 后填写打印, 并盖章后上传扫描件。支持JPG、PNG。

5. Print out the WeChat registration form, fill it out according to the image below and save or scan the signed version.

微信开放平台网站信息登记表

7. Copy the **App ID** and **Key** which you will need for the next phase of the process.

Phase 2: Configuring WeChat's Application Keys in Gigya's Website

1. Log into your Gigya account and go to the [Providers Configurations](#) page of Gigya's Console.
2. Click on **WeChat** to open its configuration window.

Main Social Networks

More

Providers that don't Require Configuration

Enable CNAME for all OpenID providers

3. Paste the 'APP ID' and 'APP Key' from phase 1, in the corresponding places:

The image shows a 'WeChat Configuration' dialog box with a blue header and a close button. The main content area contains instructions: 'Visit [WeChat](#) for tutorials on setting up an application. See our [Developer's Guide](#) for instructions on setting up an application.' Below this are two required fields: 'App ID: *' and 'Secret Access Key: *', both containing the text 'Using test key'. There is a line for an optional field with '(optional)' centered below it. At the bottom, there are two checkboxes: 'Enable CName?' and 'Secure redirects only?'. An 'OK' button is located in the bottom right corner.

4. Select **Secure redirects only** to allow only HTTPS redirects from WeChat.
5. Click **OK**, then click **Save Settings**.

Currently, Gigya only supports WeChat for Social Login. For a complete list of supported capabilities by social network, please review our [Social Network Capabilities Table](#).

That's it, WeChat's configuration is complete! Please note that it might take up to 10 minutes for our system to become synchronized with QQ.
